ABSTRACT

A kiosk structure of hollow rotary moulded plastic counter modules having a body of circular segmental configuration with top horizontal surface, horizontal bottom surface, vertical front and back walls and opposing ends of the body having a vertical bore through the top surfaces. A number of vertical support posts vertically disposed within the bores are fixed to the module beneath the top surface. A variety of differently shaped arrays can be constructed of counter modules with a lintel spanning between a post of each adjacent counter module of the array. the posts and lintels can support a tubular frame roof with fabric extending across the frame providing shelter. The kiosk structure can be easily assembled and disassembled for temporary events or for storage in off season.
